ELECTRO-MECHANICAL SURGICAL DEVICE

CROSS-REFERENCE TO RELATED APPLICATIONS

This is a continuation-in-part of U.S. Patent Application Serial No. 09/723,715, filed on November 28, 2000, which is a continuation-in-part of U.S. Patent Application Serial No. 09/324,451, filed on June 2, 1999, a continuation-in-part of U.S. Patent Application Serial No. 09/324,452, filed on June 2, 1999, a continuation-in-part of U.S. Patent Application Serial No. 09/351,534, filed on July 12, 1999, a continuation-in-part of U.S. Patent Application Serial No. 09/510,923, filed on February 22, 2000, which is a continuation-in-part of U.S. Patent Application Serial No. 09/324,452, a continuation-in-part of U.S. Patent Application Serial No. 09/510,927, filed on February 22, 2000, which is a continuation-in-part of U.S. Patent Application Serial No. 09/324,452, and a continuation-in-part of U.S. Patent Application Serial No. 09/510,932, filed on February 22, 2000.

FIELD OF THE INVENTION

The present invention relates to an electro-mechanical surgical device.

BACKGROUND INFORMATION

The literature is replete with descriptions of surgical devices. For example, U.S. Patent No. 4,705,038 to Sjostrom et al. describes a surgical system for powered instruments. The system includes a handpiece containing a motor and including a recess adapted to receive one of a plurality of surgical devices. A pair of reed switches is disposed within the recess, and each of the surgical devices includes one or two magnets adapted to actuate the reed switches in a particular
